

What went well

Adnan

- We made big progress
- There was more communication than before

Matthew

- Some of us have been active in the meetings. Because of this we got a lot more feedback and we can watch some of our past meetings. And we were able to progress a lot. There was some minor improvement when we look at task's contributions.

Dimitri

- Progress
- Communication between the project members

Colin

- we're making good progress towards goals; sprint goals get achieved
- preparations are better which results in presentations are going better
- feel like we are more motivated than previous week after the vacation

Mark

- We made a lot of progress

Ali

- Great results
- Happy teachers and stakeholders
- Asking the right and critical questions
- Creating specific issues
- Domain knowledge has been increased quite a bit
- People are on time more (except me)

What did not go well

Adnan

- I feel like not everybody was contributing as much to the project
- I feel like that certain task took way longer to be finished than it should have taken
- I feel like not everyone didn't actively participate in meeting

Matthew

I feel like as a team it's going a little bit better than before, but there still needs to be a major improvement within the team. We need to work more together, and people should join the work calls a lot more often (and not randomly leave without even saying bye)

I feel like the task's distribution is still not on the level I hoped for. This feeling is getting worse since I feel like that some people don't contribute to certain meetings at all making the first problem (task distribution) even worse.

- I feel like that certain task took way longer to be finished than it should have taken

Dimitri

- My own progress
- Help from the team members
- Insights from the teachers

Colin

- Want to see more in depth what has been done during the standups
- More asking each other once you are stuck, we are here as a team
- I feel not everybody is delivering as much as they can to the project

Mark

- I didn't communicate enough

Ali

- My presence was missed because of exam
- Mis scheduling
- Communication / lending help
- Behind on lectures so I'm not understanding everything being said / done

What I longed for

Adnan

- More teamwork
- Clearer communication on the progress

Matthew

- I really hope that there can be a major change in the upcoming weeks if you look at an active contribution within meetings. After all, if aren't actively thinking while the meeting is happening, why are you there? I think if this changes that the task distribution will become less clear and don't count as much since it's clear that you want to contribute to the project.

Dimitri

- More time to understand the progress of the project
- Clearer advices from teachers

Colin

- shorter lectures from Jeroen since they are way too long

Mark

- That I would have communicated a bit better

Ali

- Some team members in my perspective are working on less relevant issues

Actions

- Find a way to help the people who want more assistance
- Find a way to keep people up to date about issues / progress / tasks
- Find a way to work on communication in the team
- Find a way to keep people motivated on the project
- Schedule a meeting to talk about motivational issues with teacher
- Work more closely with team members to help them navigate in the project
- FROM MEETING WITH JEROEN: Assign tasks to people with few tasks on their name
- FROM MEETING WITH JEROEN: In duo programming, let the person with more expertise be the passenger and the other the chauffeur
